TASK SEATING

FABRIC TASK CHAIR

Optional Headrest - Adjust Fabric Task Chair headrest forward and back, or also vertically for a custom fit.

With one look you will know that Alt3 represents the modern alternative to the traditional task chair, but reclining in it will give you all the proof you need that it is starting a revolution in seating. The Alt3 line looks like nothing else because it is like nothing else. Guided by a shared vision to provide superior lumbar support, each member of the family is uniquely crafted to optimize its contributions to the cause.

While the mesh and fabric chairs relate to one other, freeing them from the restrictions imposed by common components allows each design to use its materials to maximum effect. This concept of a design family also allows each member to address sustainability and comfort issues in individual ways.

The Fabric Task Chair with its rectilinear shape and formidable back makes a statement that is hard to miss. Creating visual impact from every angle, its most obvious design feature is also an integral part of the chair's function. A sculptural open-frame detail posterior to the back provides necessary support and rigidity for the structure while allowing the upholstered back to flex as dictated by the automatic lumbar system.

That hallmark system allows the chair back to follow the natural curves of the thoracic and lumbar spine in an upright and fully reclined position, as well as at every stop along the way. Continuous contact with the chair's back provides continuous support for the spine and incomparable comfort over extended use.

Comfort isn't just about contact however. Personal preference and fit also play a role. In addition to typical seat height and depth adjustments, both the tension and angle of the back-tilt can be customized via controls beneath the seat of the Fabric and Mesh Task Chairs.

Removeable Upholstery - makes replacing faded or worn fabric in the field a snap, for one chair or one hundred.

Adjustable Back Tension - customizes the force needed to recline in the Mesh Back and Fabric Task Chairs.

Back Motion - provided by the automatic lumbar support system is unlike any other task chair.

Back Detail - adds visual interest to the chair's profile and structural support for its automatic lumbar system.

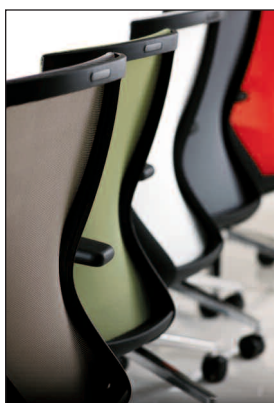

The Alt3 Mesh Task Chair approaches both lumbar support and design from a slightly different perspective. It too maintains constant contact with the thoracic and lumbar regions of the spine in a reclined position, but relies upon a different technology to do so.

The mesh material itself provides flexibility, while the reinforced frame supplies the rigidity required for real support. The exaggerated curves of the frame guide the mesh into complex three-dimensional shapes that follow the contours of the upper and lower back. The “mesh pocket” created for the lower back can also be bolstered by an optional lumbar support system. This additional lumbar support can be adjusted in height and depth to provide a targeted, more intense foundation for the user in an upright position.

These technical innovations are mirrored by design details that outshine typical matte black mesh chairs. Five-star bases of the entire Alt3 line can be specified in polished aluminum in addition to black nylon, and the task chairs’ colorful mesh inserts—from sophisticated Champagne to bold Poppy Red—allow them to contribute to the design palette instead of merely standing out of its way.

NOTE: Arms on the Alt3 Mesh Task Chair are NOT field installable.

Mesh Color Options - Choose from standard black or try champagne, grass green, white, grey and poppy red. Not available on conference chairs.

Optional Lumbar Support - provides additional targeted lumbar support that is height and depth adjustable.

Fixed Arms - with a slim profile and open design detail echo the shape and sensibility of the Mesh Task Chair.

Adjustable Arm - versions for both the Mesh and Fabric Task Chairs pivot and can be adjusted in height and forward/back.

Optional Headrest - the mesh task chair headrest option provides additional support for the cervical vertebrae. It adjusts forward and back for a custom fit.

MESH BACK OFFERS CONSTANT COMFORT

CONFERENCE CHAIR WITH PRECISE DETAILING

With its emphasis on ease-of-use in short-term seating conditions, the Alt3 Conference Chair also approaches support and design from a unique position. Like the Mesh Task Chair, its back relies on the frame's curves and resulting "mesh pocket" to provide constant contact and lumbar support. The depth and height adjustments required by the task chair's additional lumbar support system however, make that option impractical for the Conference Chair.

For similar reasons, the Conference Chair also eliminates the seat depth adjustment, retains a fixed seat-back angle, and is available with an auto-height/auto-return pneumatic cylinder. This cylinder returns the chair to its original forward facing and highest seat positions when the user stands, which provides a tidy look for the space and uniform seating experience for its subsequent occupants.

Even the fixed loop arms of the Conference Chair are designed to be comfortable without any user input. In contrast, the T-arms of the task chairs can be adjusted in height and front-to-back. They can also be pivoted outward to provide a degree of width customization.

The arms of the Alt3 family members also serve to highlight another difference between them, their approach to sustainability. While all three chairs use recycled content, renewable materials, and meet Greenguard standards for indoor air quality, the arm caps of the Alt3 Fabric Task Chair go one step further. Not only is the outer polyurethane layer of the cap recyclable, but because it is not fused to the underlying layers, the entire cap can also be separated and recycled more easily.

With modern sensibilities, modern design cues, and a modern take on lumbar support, Alt3 is leading a revolution in seating. Are you ready to take up the cause?

Fixed Loop Arm - requires no adjustment for complete comfort and contributes to the style and structure of the chair.

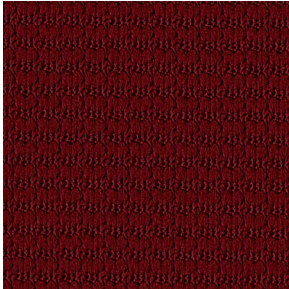

Conference Back - uses a complex three-dimensional shape resulting in a built-in lumbar and constant back support.

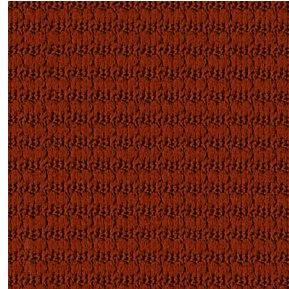

Mechanism - the conference chair's tilt mechanism locks in place or can be in the free float position. Back recline is adjusted with the tilt tension adjustment knob.

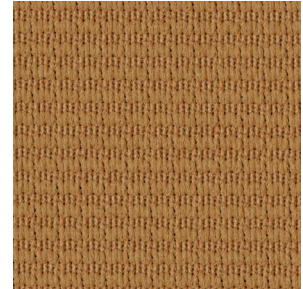

FULLY UPHOLSTERED ALT3 CHAIRS ARE ONLY AVAILABLE IN THE FOLLOWING FABRICS:

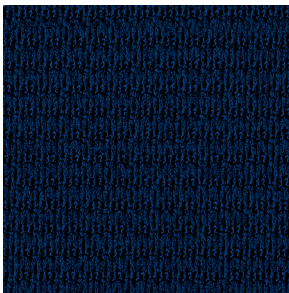

MERLOT (A1ML)

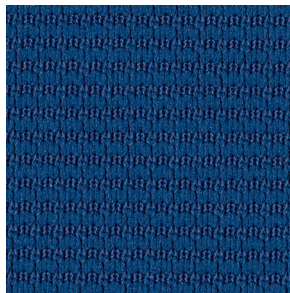

RUSSET (A1RS)

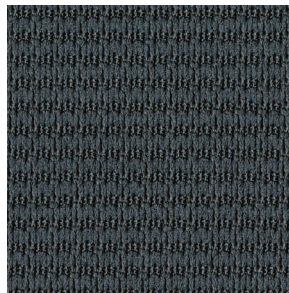

MUSTARD SEED (A1MS)

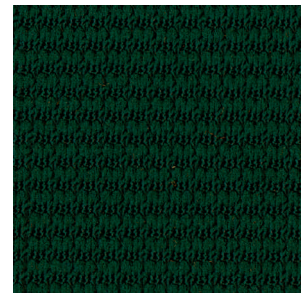

BLUE LAGOON (A1BL)

PERIWINKLE (A1PW)

GUNMETAL (A1GM)

FOREST (A1FR)

MIDNIGHT (A1MN)

ALT3 BLACK LEATHER
